
Company

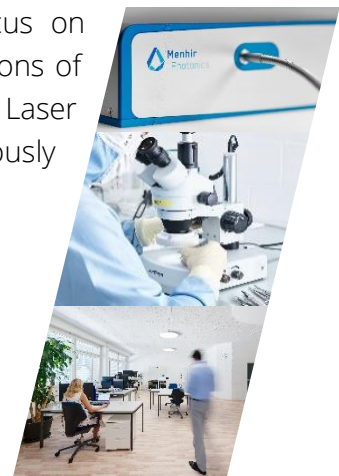

Menhir Photonics is a Swiss laser manufacturer offering laser solutions of unprecedented robustness and reliability to customers around the globe. Based in Switzerland, our team has strong expertise in the development and production of ultrafast lasers for the markets of aerospace, telecom, and metrology. For our development and production site near Zürich, we are looking for a **Laser Production Engineer**.

Mission

You will work in the laser production department with a focus on production and testing. You will closely interact with other functions of the company such as Electrical & Mechanical Engineering, Laser Engineering, and the company management for continuously improving the production processes.

You will be responsible for:

- The production of laser systems.
- The qualification and testing of laser systems.
- Giving feedback to the engineering team regarding production processes and needed improvements.

Profile

- You have a degree in engineering, physics or a comparable education and experience in an industrial environment. Ideally, you have knowledge in the field of optics and optics assembly including experience with working under cleanroom conditions.
- You are a team player and like working in very dynamic team in a fast-growing business environment. You are willing to take responsibility, work independently and approach problems in an analytical way.
- Thanks to our global operation, excellent knowledge of English language is mandatory. Knowledge of German language is also preferred.

Conditions

- The position offered is a full-time position with a starting date in June 2023.
- The workplace is located at our development and production site near Zürich (Glattbrugg).
